Automated Scoring Coding Sheet Changelog

Nov 5, 2026 | Author: Aaron Wong

The GenAI Evidence Hub is a structured literature review of recent research into using Generative AI in automated scoring, item generation, and formative feedback. For more information about the study, see the pre-registration at https://osf.io/ar3yg/overview.

This document records changes made to the automated scoring coding sheet during technical deep dive calls with the coding team from approximately September 26, 2025, through November 5, 2026.

---

v1.6.0

Changed

- Renamed Metric Source columns to Metric Model.

Removed

- Blog Post option from the Publication Type list.
- Multimodal Inferences option from the Domain list.
- Personalized Instruction and Learning Materials options from the Education Content list.
- Teacher/Tutor Feedback option from the Training Source and Testing Source lists.
- Kappa (Fleiss'), Scott's Pi, and Maximum Absolute Error options from the Metric Type list.

v1.5.0

Changed

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- Combined Fairness Evaluated and Bias Evaluated columns into a single Bias/Fairness Evaluated column.

v1.4.0

Added

- Standardized assessments to the education content list.

Changed

- Renamed SEL skills to SEL or Durable skills in the education content list for clarity.
- Education segment field converted to a multiselection field.
- Updated automated scoring description to include AI detection.
- Renamed Tested model list to Tested Model and Techniques List for clarity.
- Renamed Total models tested to Total number of models tested for clarity.

Removed

- Type of research column.
- Analysis date column.

v1.3.0

Added

- Renamed bias to bias evaluated and fairness evaluation to fairness evaluation method for clarity.
- N/A option to the prompting techniques field.
- Unknown option to the metric truth field.
- Language learning or assessment to the education segment list.
- Formative assessment to the education content list.
- Standardized mean difference to the metric list.

v1.2.0

Added

- Metric list column to track reported metrics.
- Removed N/A option from required field dropdowns to enforce value selection.

 © 2026 Learning Data Insights. Licensed under CC BY 4.0.

v1.1.0

Added

- Other options to AI innovation, metric truth, and bias columns where not all possible options are listed.
- N/A option to all dropdown fields.

Changed

- Converted GenAI, domain, quality assurance, fairness acknowledged, fairness evaluated, and fairness conclusion from checkboxes to dropdowns to prevent blank values.
- Renamed specific prompt to specific prompt reported to reflect reporting constraints.

v1.0.0

Changed

- Updated options for metric truth columns to reduce confusion.
- Renamed comparison group columns to baseline for consistent terminology.

v0.10

Added

- Total baseline and baseline list columns to track the number and types of baselines used.
- Root mean square error and another option to the metric list.

Changed

- Modified comparison group minimum and maximum source to a free text field to support specific baseline reporting when multiple baselines apply.
- Made fairness acknowledged and fairness evaluated tested mandatory fields.

Removed

- GenAI category column due to coding ambiguity. This will be reintroduced in the systematic review phase.

 © 2026 Learning Data Insights. Licensed under CC BY 4.0.

v0.91

Changed

- Hide metric columns three through ten to reduce visual complexity.
- Moved the research question column to the beginning of the research design section.
- Reordered applied insights to appear before fairness and research design sections.
- Split reviewer notes and resources into separate columns for notes and for resources and reviewer information.

v0.9

Added

- Expanded educational content options for greater specificity, including writing short answer or essay, writing scientific explanations, writing mathematical explanations, and math problems.

Changed

- Updated Tested LLM Model and Version Used and Tested Model List column names to reflect tested and reported models only.
- Updated autocalculation logic so values display only when required fields are populated.

v0.8

Added

- Model list column to record all tested models.
- Comparison difference column in the metrics section to show performance differences between tested models and baseline groups.

Changed

- Renamed total models column to total models tested for clarity.

Removed

 © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- Total techniques column as it was redundant with the multi selection prompting techniques field.

v0.7

Added

- Study design comments and research question design comments columns.

Changed

- Updated all dropdown fields to populate from controlled field lists, enabling future expansion.
- Moved total models, tested LLM model and version, total techniques, and prompting techniques from study design to research question design to reflect variation across research questions.

v0.6

Changed

- Restructured the evaluation methods section to support up to ten metrics via dropdown selection.
- Reduced the total number of metric columns while maintaining a fixed sheet length.

v0.5

Added

- Minimum and maximum comparison columns to support studies with multiple baseline comparisons.
- Test materials as an option under educational content.

v0.4

Added

- Total models column to capture how many models were used.
- Total techniques column to capture how many techniques were applied.
- F1 metric column to support alternative F1 calculation methods.
- Applied insights column to capture practitioner relevant findings.

 © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- AI innovation column to document impacts on educational practice.
- Truth source columns for accuracy measures.
- Model attribution columns for minimum and maximum values when multiple models are reported.

Changed

- Renamed Model ID to Research Question ID to support multiple models per row.
- Split study design into overall study design and research question specific design sections.

Removed

- LLM category from coding. This is captured in the systematic review instead.

v0.3

Added

- Research question column to reflect that different research questions may require different models.
- Minimum and maximum score columns to provide more granular performance reporting.

v0.2

Changed

- Modified the original coding sheet structure, including additions, renames, redefinitions, and removals.

Automated Item Generation Coding Sheet Changelog

Nov 5, 2026 | Author: Aaron Wong

The GenAI Evidence Hub is a structured literature review of recent research into using Generative AI in automated scoring, item generation, and formative feedback. For more information about the study, see the pre-registration at https://osf.io/ar3yg/overview.

This document records changes made to the automated item generation coding sheet during technical deep dive calls with the coding team from approximately March 31, 2026, through November 5, 2026.

---

v1.0.0

Added

- Questions (Categorical) option to the Metric Assessment Tool list.
- Pre-print at Time of Coding option to the Publication Type list.
- Kappa (Quadratic Weighted) option to the Metric Type list.

Changed

- Renamed options in the Metric Truth list.
- Renamed Metric Evaluation Results columns to Metric Additional Evaluation Results.
- Renamed Metric Source columns to Metric Model.

Removed

- Blog Post option from the Publication Type list.
- Human-Machine Distinction, ICC, Standardized Mean Difference, AUROC, Kappa (Randolph's), Kappa (Fleiss'), Kappa (Matthews), Scott's Pi, and Maximum Absolute Error options from the Metric Type list.
- Interview option from the Metric Assessment Tool list.

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- Multimodal Inferences option from the Domain list.

v0.0.8

Added

- Medical and Reading options to the Education Topic list.

Changed

- Renamed Bias/Fairness Conclusion to Bias/Fairness Addressed.
- Education Content converted to a multiselection field.

v0.0.7

Added

- Unknown option to the Prompting Technique list.
- Cronbach's Alpha option to the Metric Type list.

Changed

- Renamed Fairness Acknowledged to Bias/Fairness Acknowledged.
- Renamed Bias/Fairness Evaluated to Bias/Fairness Type.
- Renamed Fairness Evaluation Method to Bias/Fairness Evaluation Method.
- Renamed Fairness Conclusion to Bias/Fairness Conclusion.
- Removed Not Evaluated option from the Bias/Fairness Acknowledged list.

v0.0.6

Added

- Education Topic column.

v0.0.5

Changed

- Renamed Text Comparisons to Comparisons in the Metric Analysis Type list.
- Combined Validity, Usability, and Quality into a single option in the Metric Category list.
- Renamed Item Quality Rating to Item Rating in the Metric Type list.

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

v0.0.4

Added

- Proportion of Total to the Metric Type list.

Changed

- Analysis Type converted to a multiselection field.
- Analysis Category converted to a multiselection field.
- Combined Validity and Usability in the Analysis Category list.
- Renamed Human Review to Evaluative Review.
- Renamed Evaluative Decision to Evaluative Results.
- Reorganized the Metric Type list to prioritize more commonly used metrics.
- Updated Education Content list — removed Lesson Plans as it is not an assessment type.

Removed

- Training Source and Testing Source columns.

v0.0.3

Added

- Analysis Category column to the metrics section.
- Metric Category column.
- Metric Assessment Tool column.
- Metric Evaluation Decision column.
- Additional options to Training Source, Testing Source, and Education Content lists.

Changed

- Combined qualitative and quantitative sections.

v0.0.2

Added

- Qualitative section with three new columns.
- Additional options to the Metric Truth list.

 © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- Additional options to the Metric Type list.

v0.0.1

Changed

- Added additional metrics to the Metric Type list.
- Updated options in the Education Content list.

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

Formative Feedback Coding Sheet Changelog

Nov 5, 2026 | Author: Aaron Wong

The GenAI Evidence Hub is a structured literature review of recent research into using Generative AI in automated scoring, item generation, and formative feedback. For more information about the study, see the pre-registration at https://osf.io/ar3yg/overview.

This document records changes made to the formative feedback coding sheet during technical deep dive calls with the coding team from approximately July 24, 2026, through November 5, 2026.

---

v1.0.0

Added

- Questions (Categorical) option to the Metric Assessment Tool list.
- Pre-print at Time of Coding option to the Publication Type list.
- Kappa (Quadratic Weighted) option to the Metric Type list.

Changed

- Renamed options in the Metric Truth list.
- Renamed Metric Evaluation Results columns to Metric Additional Evaluation Results.
- Renamed Metric Source columns to Metric Model.

Removed

- Blog Post option from the Publication Type list.
- Human-Machine Distinction, ICC, F0.5, AUROC, Kappa (Randolph's), Kappa (Fleiss'), Kappa (Matthews), Scott's Pi, Mean Absolute Error, Maximum Absolute Error, and Non-parametric Test options from the Metric Type list.
- Interview option from the Metric Assessment Tool list.

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- Multimodal Inferences option from the Domain list.
- Teacher/Tutor Responses option from the Training Source list.
- Lesson Plan option from the Testing Source list.

v0.0.4

Changed

- Renamed Synthetic Tutoring Transcripts to Synthetic Feedback in the Training Source and Testing Source lists.

v0.0.3

Added

- Synthetic Dialogue option to the Testing Source list.
- Medical option to the Education Topic list.

Changed

- Renamed Unknown to Unspecified in the Feedback Type list.

v0.0.2

Added

- Unknown option to the Feedback Content list.

Changed

- Renamed Education Content column to Feedback Content.
- Renamed AI-Generated Tutoring Transcripts to Synthetic Tutoring Transcripts in the Training Source list.
- Updated options in the Testing Source list.
- Updated options in the Metric Assessment Tool list.

v0.0.1

Added

- Usage column, with a follow-up column to record numbers when Usage is Yes.
- Training Source and Testing Source columns, reintroduced with updated options.

Part of the GenAI Evidence Hub, a Learning Data Insights project reviewing research on evaluation practices for generative AI in educational assessment. © 2026 Learning Data Insights. Licensed under CC BY 4.0.

- New options to the Education Content, Metric Analysis Type, Metric Type, and Metric Truth lists.

Changed

- Adapted from the Automated Item Generation coding sheet.
- Education Content, Metric Truth, Training Source, and Testing Source converted to multiselection fields.
